

Lay-Ins®

Tamlite Lay-Ins products are already an industry leader in quality. One of the unique features of our product is the finish which is a high reflective powder coat baked over hot-dipped galvanized. Tamlite Lay-In products are post powder coated which means that the high reflective white powder coat finish is applied after all metal work is completed.

To further improve our process we have upgraded our powder coat system!

Tamlite Lay-Ins is proud to have a new ITW Gema Optiflex Automatic Powder Coat System with 6 guns. This system now brings our powder coat processing capabilities equivalent with those of automotive standards. We are also proud to now work along with the ITW Gema team and their top quality production equipment.

LAY-INS PRODUCT ARE MADE IN AMERICA
